

The Two-Sided Diamond Sharpening Stone from Edge Master features two sides, one coarse 360 grit side for rough work and one fine 600 grit side for fine work and will sharpen knives up to five times faster than using an oil stone or a whetstone. Industrial monocrystalline diamonds are electroplated onto a steel base and the super flat surface guarantees even contact with knives and tools.

- Two sides: 360 coarse grit for rough work and 600 fine grit for finer work
- Sharpen dry; no oil or water required.
- Fast, durable, and heavy duty.
- Industrial monocrystalline diamonds are electroplated onto a steel base.
- Up to five times faster sharpening than an oil stone or whetstone.
